Its purpose is to ensure the amount of water proposed for use as mitigation for new water rights is consistent with the water available in First Creek and that the water supply is suitably reliable for domestic purposes. The Water Monitoring and Management Plan may be modified from time to

time, upon agreement between Roan and the Department of Ecology after informal consultation with the USBR. Modifications to the plan must be agreed to in writing, signed by authorized representatives of Roan and the Department of Ecology.

Place of Use: Within Section 18, T. 18 N., R. 20 E.W.M.: Commencing at the northwest corner of Section 18, thence N 87°46'50" E 1829 feet to the true point of beginning; thence S 35°48'37" E 926 feet; thence S 1°52'04" E 114 feet to dry creek bed; thence southerly along the dry creek bed approximately 1794 feet to the south boundary of the SE¼NW¼ of Section 18; thence westerly along the south boundary to the southwest corner of the SW¼SE¼NW¼ of Section 18; thence north to the northwest corner of the NE¼NW¼ of Section 18; thence N 87°46'50" E to the true point of beginning; excepting therefrom the S½NW¼SE¼NW¼ and the SW¼SE¼NW¼ of Section 18.

Limitations Of Use:

1. When frost is out of the ground before April 15, the period of use is modified to allow use of water as soon as frost is out of the ground and water can be beneficially used.
2. When surplus water is available in excess of that needed to satisfy all existing rights, an additional 0.70 cfs can be diverted. This water will normally be available approximately 30 days during the spring, which would result in up to 41.58 acre-feet per year being used in addition to that authorized herein.
3. Diversion under this authorization is limited to the availability of natural flow water in Cooke Creek at the historic point of diversion in the NW¼SW¼ of Section 1, T. 17 N., R. 19 E.W.M.
4. Each year the applicant shall monitor snow water-equivalent (SWE) measurements every two weeks from the USGS Trough SNOTEL station. On May 15 of each year, the applicant shall submit such data and notify Ecology that diversions under this water right will be adjusted according to the following criteria:
a. In a "dry" year characterized by a SWE less than or

equal to the 90% exceedance on May 1, the season of use shall be curtailed on July 1.

b. In a "below-average" year characterized by a SWE between the 90% and 50% exceedance on May 1, the season of use shall be curtailed on July 15.

c. In all other years, the season of use shall be curtailed subject to water availability at the authorized point of diversion; except, however, that at all times this right is subject to the senior 0.25 cfs non-diversionary stock water and habitat flows, and the applicant may not divert water from Cooke Creek from the authorized point of diversion if such flows are not satisfied.

Primary Reach B: Begins at the end of Primary Reach A (FDA turnout #23), and travels west in a buried pipeline through a hop field owned by Lester Roy, Royal Enterprises Partnership (easement dated September 13, 2001, filed through the Yakima County Auditor's Office on September 14, 2001), for a distance of 1,750 feet across the N½SW¼ of

Section 35, T. 13 N., R. 19 E.W.M., discharging into the Little Moxee Drain. The water then travels south 1,500 feet in the drain to Postma Road, then west 2,800 feet in the drain along the north side of Postma Road to Birchfield Road, then under Birchfield Road, discharging into a drainage channel/stream course that traverses southwesterly 2,900 feet to the point where the stream course enters the northeast corner of the Reclamation 'former Roy' property. This entry point is approximately 1,350 feet westerly of the east quarter corner of Section 4, T. 12 N., R. 19 E.W.M. At this point, the water flows into the Reclamation/CPM wetland enhancement and creation project area, where a portion of the water us used for creation of 32.23 acres of wetland. Primary Reach B ends in this project area.

Secondary Reach: Begins at the end of Primary Reach B, at the downstream end of the Reclamation/CPM wetland enhancement and creation project area in the northeast corner of Reclamation's 'former Roy Ranch' property, approximately 830 feet south and 2,539 feet west of the east quarter corner of Section 4, within the SE¼ of Section 4, T. 12 N., R. 19 E.W.M. [Yakima County Parcel No. 191204-42003]. The Secondary Reach water continues to flow southwesterly through the Reclamation 'former Roy' property, enhancing instream flows and wetlands in the natural stream courses and drainages on the property that discharge into lower Moxee Slough and lower Blue Slough, to Blue Slough's confluence with the Yakima River, located approximately 550 feet north and 1,250 feet west of the southeast corner of Section 8, being within the S½SE¼ of Section 8 T. 12 N., R. 19 E.W.M. [Blue Slough RM 0.0, Yakima RM 107.5, approximately, Yakima County Parcel No. 191208-99989]. The Secondary Reach then continues down the Yakima River to its confluence with the Columbia River, located within the NE¼ of Section 19, T. 9 N., R. 29 E.W.M. [Yakima RM 0.0, Columbia RM 355.0]; and continues down the Columbia River to the Secondary Reach's termination at the confluence of the Columbia River with the Pacific Ocean, located approximately in T. 9 N., R. 11 W.W.M. [Columbia RM 0.0].

Priority Date: **October 4, 1904**

Point of Diversion: N/A

Place of Use: Primary Reach-Instream flow Trust water use within the Naches River and its side channels, including the South Naches Channel, with the primary reach beginning at the Wapatox Canal diversion point (POD) from the Naches River, located 850 feet north and 950 feet east from the west quarter corner of Section 36, being within the SW¼NW¼ of Section 36, T. 15 N., R. 16 E.W.M. (Naches River Mile (RM) 17.1); and travelling down the Naches River and its side channels, including the South Naches Channel, to the primary reach's end at Reclamation's former Pacific Power & Light Company Wapatox Power Plant tailrace discharge/return point back to the Naches River, located within the SW¼SW¼ of Section 13, T. 14 N., R. 17 E.W.M. (Naches RM 9.72).

Up to approximately 20 cfs of this instream flow Trust water may be routed through the South Naches Channel (a former Naches River channel that is now the upper end of the South Naches Irrigation District's (SNID) irrigation water conveyance system), from its head end and diversion point from the Naches River located 375 feet south and 275 feet east of the west quarter corner of Section 4, being within the NW¼SW¼ of Section 4, T. 14 N., R. 17 E.W.M. This non-consumptive conveyance water use portion is a small portion, currently approximately 30 cfs, of the total Trust water right, that Reclamation is currently obligated, by contract and Court Order, to divert and run down the Wapatox Canal, during the irrigation season, to ensure delivery of the irrigation water rights of the Wapatox Ditch Company and several other individual irrigators who share the use of the Wapatox Canal to the various distribution points or turnouts from the canal.

Secondary Reach- N/A

Limitations Of Use: The authorized total water use is limited to 300 cfs as a minimum and 450 cfs as a maximum, or as otherwise shaped by the United States Bureau of Reclamation, when naturally available in the river, under this right and the rights confirmed for diversions from the Naches River into the Wapatox Canal by the Wapatox Ditch Company, Thomas E. and Delores I. Therefore, at such time as minimum flows are established on this stream in accordance with chapter 90.22 RCW, or base flows under Chapter 90.54 RCW, this certificate shall be conditioned to the extent of the new setting, provided that, under no conditions shall the certificate holder be subject to a low flow requirement of greater than 700 cubic feet per second at the above-referenced gage. The confirmation of the diversion at Point of Diversion No. 1 above, in no way requires the Columbia Irrigation District to transport water in its facilities without benefit of a contract between the parties.
