| NARRATIVE DESCRIPTION OF PROJECT: The Washington Department of Fish and Wildlife (WDFW) submitted a seasonal change application to change the place of use and point of diversion of S4-84062-J downstream to the Sunnyside Wildlife Area. WDFW plans to take water out of Giffin lake to irrigate 32 acres of wildlife habitat in the new place of use. Adjudicated Surface Water Certificate No. S4-84003-J is only one other water right that diverts water from Giffin Lake, WDFW's holds S4-84003-J which is for habitat improvement from November 1-April 15. S4-84062-J and was in the state trust water right program from 2009 to 2019 until a seasonally change was approved in 2019. The 2020 change request has the same elements of the 2019 request, but since it is being evaluated earlier in the year it will be for a longer duration. Ecology believes that this transfer will not impair existing rights. |
